## ELECTION/RESTRICTION

### ELECTION/RESTRICTION

**1.** Restriction to one of the following inventions is required under 35 U.S.C. 121:

**I. Claim(s) 1-31**, drawn to a method of selectively amplifying nucleic acid sequences, classified in class 435, subclass 91.1.

**II. Claim(s) 32-42**, drawn to an open circle probe, classified in class 536, subclass 24.3.

**2.** The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product, for example the probe can be as a molecular weight marker in gel electrophoresis.

**3.** Because these inventions are distinct for the reason given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

**4.** Applicant is advised that the response to this requirement to be complete must include an election of the one invention to be examined even though the requirement be traversed (37 CFR 1.143).
